Certification of the Sparviero Ultralight Aircraft Status Report 01.12.2011

This report is based on my third visit at Corigliano d'Otranto from Nov. 28th through Dec. 1 2011.

The agenda for this visit was to finalize the load tests with the goal to issue a preliminary permit to fly.

Summary:

All structural load tests have been performed up to unlimited loads except for the control system. The control system was only checked up to limit load, because no mock up was available for tests up to ultimate load.

All tests have been passed to the predefined and required standards.
Ultimate load tests on the control system have to be performed prior to final certification.

A preliminary permit to fly may be issued any time on request.

Günther Spitzer
